

# Post ZENworks 11 SP4 Update Prerequisites

December 2015

Novell.

The information in this Readme pertains to the Post ZENworks 11 SP4 Update Prerequisites.

- ♦ [Section 1, "Overview," on page 1](#)
- ♦ [Section 2, "System Requirements," on page 1](#)
- ♦ [Section 3, "Installation," on page 1](#)
- ♦ [Section 4, "Known Issue," on page 2](#)
- ♦ [Section 5, "Legal Notices," on page 2](#)

## 1 Overview

The `Post_11SP4_Update_Prereq` enables support for downloading ZENworks updates from the NCC server and has fixes for `zenloader` to enable the deployment of future ZENworks 11.4.x updates. Hence, it is a mandatory update that is required for all future ZENworks 11.4.x releases. For more information, see TID [7016896](#).

## 2 System Requirements

This update is applicable only to Primary Servers running ZENworks 11 SP4.

## 3 Installation

Read these instructions carefully, they are different from those for any previous version of ZENworks.

### 3.1 Preparing the Prerequisites

Ensure that the servers are updated to ZENworks 11 SP4. For more information, see TID [7016896](#).

### 3.2 Preparing for Deployment

- 1 Download `ZCM_11_4_Post_11SP4_Update_Prereq.zip`.
- 2 Copy the zip file to one of the ZENworks servers in the zone. (If the system update is configured to use a "Dedicated System Update Server", use the same server to import). Do not unzip the file.

For example:

- ♦ Linux: Copy the zip file to `/tmp`
  - ♦ Windows: Copy the zip file to `%ZENWORKS_HOME%`
- 3 Using the command prompt on the ZENworks server where you copied the zip file in `step 1`, run the `zman sui [path to zip file]` command.

For details, run the `zman sui --help` command.

For example:

- ◆ Windows:

```
zman sui "C:\Program  
Files\Novell\ZENworks\ZCM_11_4_Post_11SP4_Update_Prereq.zip"
```

- ◆ Linux: `zman sui /tmp/ZCM_11_4_Post_11SP4_Update_Prereq.zip`

The `zman sui` command should report: The update(s) contained in "[path to file]" `ZCM_11_4_Post_11SP4_Update_Prereq.zip` will begin importing shortly. You may use ZCC to track the status of your import.

- 4 In ZENworks Control Center, navigate to **Configuration > System Updates** and monitor the status of **Post 11SP4 Update Prereq** until it shows **Downloaded**.
- 5 After the Update is imported, deploy it to all the Primary Servers.

### 3.3 Deployment

You can deploy `Post 11SP4 Update Prereq` to any Primary Server running ZENworks 11 SP4.

Deploying this update to Primary Servers will also rebuild the agent deployment packages. For deployment guidelines, see [Deploying Updates](#), in the *ZENworks 11 SP4 documentation*.

When deploying to a Windows server, even after a reboot, ZENworks Control Center shows the deployment status staying at the same percentage for a long time, check the `system-update` log. If the log shows the deployment as 100%, refresh the agent on the server.

## 4 Known Issue

- ◆ [Section 4.1, "Replication Status cannot be viewed in ZENworks Control Center," on page 2](#)

### 4.1 Replication Status cannot be viewed in ZENworks Control Center

Replication Status of this update cannot be viewed in ZENworks Control Center.

Workaround: After you update the Primary Server you can view the status from that server. The Replication status is displayed as 0% for content Satellite Servers. Hence, ignore the Replication Status.
